

AMENDMENTS TO THE SPECIFICATION

Please amend paragraph [0021] on page 8 as follows:

[0021] From Table III it may be seen that the diverting agent of this invention effectively plugged the cores indicating that it would serve effectively as a diverting agent in the method of this invention. The reason the regain permeability for core 2 of is different from the regain perm for the other three cores is possibly due to the slower dissolution rate in EGMBE compared to Blend C.
